

INDEX

Volume 20 numbers 1-10

January/February—December 1988

SUBJECT INDEX

A

A survey of silicon compilation 221
 adaptive subdivision 398
 algorithms 197, 239, 263, 506
 Algorithms for physical design of 'sea-of-gates' chips 382
 Algorithms in graph theory and their use for solving problems in architectural design 373
 Application of vector sum operator 183
 applications-based courses 290
 Applications-based postgraduate course in CAE 290
 approximation 398, 475
 architectural design 137, 373
 architecture 217, 581
 arrays 484
 assembly 570
 attributed adjacency graph 58
 Automated placement and routing 39
 Automatic construction of curvilinear solids from wireframe views 171
 Automatic construction of surfaces with prescribed shape 317
 Automating extrusion design: a case study in geometric reasoning for mechanical design 589
 automation of design and analysis processes 189

B

Benchmarking 3D graphics systems 420
 Bézier curve 114, 398
 Bézier techniques 2
 biquadratic patches 452
 Blended tensor product B-spline surface 336
 blending 325

BOOKS AND PUBLICATIONS

Begg, V Developing expert CAD systems 298
 Berger, M Computer graphics with Pascal 48
 Björke, O Advanced production system 426
 Bowman, D J and Bowman, A C Understanding CAD/CAM 162
 Brebbia, C A and Keramidias, G A (eds) Reliability and robustness of engineering software 298
 Brebbia, C A, Wendland, W L and Kuhn, G (eds) Boundary elements IX Vols 1, 2 and 3 360
 Butler, R Lamanal - user's manual 48

Crawford, P and Coticchia CAD/CAM systems: justification, implementation, productivity measurement 497
 Fichtner, W and Morf, M (eds) VLSI CAD tools and applications 162
 Fischler, M A and Firschein, O Readings in computer vision 109
 Hawkes, B The CAD/CAM process 498
 Hulse, R and Mosley, W H Prestressed concrete design by computer 427
 IMechE Computers in engine technology: Proceedings of the Institution of Mechanical Engineers 163
 IMechE UK research in advanced manufacture: Proceedings of the Institution of Mechanical Engineers 226
 ISTO/DARPA Proceedings: Image Understanding Workshop 225
 Kalay, Y E Principles of computer-aided design: graphic introduction to programming 362
 Kronenberg, J Computer-aided design in refurbishment 300
 Kunii, T L (ed) Computer graphics '87 362
 Lancaster, P and Salkauskas, K Curve and surface fitting: an introduction 360
 Little, S E The organisational implications of computer technology for professional work 299
 Maday, C J Computer-aided design of feedback systems for time response 224
 Martin, R R (ed) The mathematics of surfaces II 163
 Mason, J C and Cox, M G (eds) Algorithms for approximation 108
 McGoldrick, P (ed) Advances in Manufacturing Technology II: Proceedings of the 3rd National Conference on Production Research 300
 McKissick, M L Computer-Aided Drafting and Design 50
 Mitchell, W J, Liggett, R S and Kvan, T The art of computer graphics programming 223
 Murthy, T K S and Fielding, J P (eds) Computer applications in spacecraft design and operation 497
 Neelamkavil, F Computer simulation and modelling 222
 Parker, K P Integrating design and test: using CAE tools for ATE programming 428
 Pey, J P and Brebbia, C A (eds) Computer-aided engineering systems, volumes one and two 299
 Rogers, D F and Earnshaw, R A (eds) Techniques for computer graphics 222
 Rubin, S M Computer aids for VLSI design 108

Russel, G Computer aided tools for VLSI system design 48
 Ryan, D L Modern graphic communications: a CAD approach 428
 Sabonnadiere, J-C and Coulomb, J-L Finite elements methods in CAD 226
 Schlechtendahl, E G Specification of a CAD*I neutral file 361
 Schwartz, A F Computer-aided design of microelectronic circuits and systems 50
 Swift, K G Knowledge-based design for manufacture 224
 Takagi, N and Branch, J (eds) CAD/CAM in M/S in Japan 49
 Wang, C C (ed) Advances in CAD/CAM workstations: case studies 49
 Webber, B L and Nilsson, N J (eds) Readings in artificial intelligence 109

Boolean operations between solids and surfaces by octrees: models and algorithm 452
 boundaries 281
 Boundary evaluation and direct display of CSG models 416
 boundary model 189
 boundary representation 75, 151, 434
 bounding boxes 506
 building analysis 525
 B-splines 181, 353, 441, 471, 597

C

CAD for control systems - a review of PC software 574
 Checking for tool collisions in turning 281
 checking procedure 281
 Circuit simulation 160
 colour schemes 217
 Comparison between time domain and frequency domain computer program for building energy analysis 525
 Compound surface modelling and machining 127
 compound surfaces 127
 computational geometry 67
 Computer modelling of microexcavator 549
 Computer-aided controller design environment for use with nonlinear systems 539
 computer-aided engineering 290
 computer-aided geometric design 197, 259, 307, 312, 317, 325, 336, 341
 computer-aided manufacturing 183, 290
 computer-generated models 217
 constructive solid geometry 75
 continuity 259, 325, 475
 contours 281

controllers 539
convex 317
cubic curves 615
curvature 146, 317
curvature bounds for planar B-spline curve segments 146
curved surfaces 466
curves 146, 197, 259, 307, 475, 471, 533, 615

D
database 570
de Casteljau algorithm 114
de Casteljau-type subdivision is peculiar to Bézier curves 114
Degree reduction of Bézier curves 398
design 83
design problems 234
Designing z-transform packets for relational databases 100
Developing CAD techniques for preliminary architectural design 581
digging arm design 549
dimensions 151
direct kinematics 93
discrete B-splines 353
domain 127, 239
Drawing wiggly lines 356
drive systems 555

E
entities 151
Establishment of functional relationships between product components in assembly database 570
Expert form feature modelling shell 515
extrusions 589

F
face area evaluation 75
Face area evaluation algorithm for solids 75
fairing 597
fatigue life prediction 555
feature recognition 58, 189
finite element analysis 212
Finite element mesh generation methods: a review and classification 27
finite element methods 27
First university course in computer graphics 566
form features 515
frequency analysis 525

G
gear trains 83
gears 83
Generalized Bernstein-Bézier curves and surfaces 259
Generation of symbolic layout in one-dimensional array 484
geometric design 434, 441, 452, 471, 475
geometric reasoning 589
geometry 2, 11, 114, 117, 181, 212, 506
graph theory 373
graphing 615
Graph-based heuristics for recognition of machined features from a 3D solid model 58

H
Hermite- and Coons-like interpolants using rational Bézier approximation form with infinite control points 2

heuristics 263
Hidden-line algorithm for curved surfaces 466
hidden-line removal 249
image plane parametrization 249
Impacting the design process using solid modelling and automated finite element mesh generation 212
Input method of boundary solid by sketching 434
Integer algorithm for rendering curved surfaces 197
Interactive robot simulator for high-level tasks 93
interference 281
interpolants 2, 11
interpolation 239, 441
intersection algorithm 347
Intersection of arbitrary surfaces 533
inverse kinematics 93
inverse projection 434

K
kinematics 406
knot insertion 181, 353
knowledge-based system 137

L
layout 484
line drawing devices 249

M
machining 281
mechanical design 589
mechanical parts 605
mesh generation 27, 212
Method for fairing B-spline surfaces 597
model conversion 171
modelling 570
Models and algorithms for structured layout 263
motion analysis 93

N
NC machining 127
net extraction 17
netlists 484
nonlinear system 539
Nonrectangular surface patches with curvature continuity 325
Non-negative exponential splines 11
Note on the Oslo algorithm 353
numerical methods 234

O
object-oriented design 272
octrees 452
Offset approximation of uniform B-splines 471
offsets 471
offsetting 67
Offsetting in geometric modelling 67
On the definition of geometric continuity 370
Optimal approximate conversion of spline curves and spline approximation of offset curves 475
optimization 83, 475, 539

P
parallel projection 249
parametric surfaces 441
Parametrizing and graphing nonsingular cubic curves 615

part description 58
partial differential equations 234
penalty combined method 234
Penalty combined method for CAD 234
placement 263, 382
polygons 506
polyhedral features 58
Practical approach to optimum gear train design 83
Practical uses of ICES 358
Predictor-corrector type of intersection algorithm for parametric surfaces 347
preliminary design 581
primitives 127
Problems in geometric continuity 499
process planning 58
Program for torsional dynamic modelling of drive systems and fatigue life prediction 555
projections 171
Putting objects into boxes 506

Q
Quintic splines for kinematic design 406

R
reconstruction of solids 171
recursion 181
recursive curve scheme 114
Recursive proof of Boehm's knot insertion technique 181
reflection lines 312
relational databases 100
robot simulator 93
Rounding facility for solid modelling of mechanical parts 605
routing 263, 382
rule-based system 117

S
scan curves 75
Scheme for automatic dimensioning of CSG defined parts 151
sculptured surfaces 452
sea-of-gates 382
set-theoretic model 189
shell 515
simulation 555
sketching 434
Skinning techniques for interactive B-spline surface interpolation 441
Smoothing surfaces using reflection lines for families of splines 312
solid modelling 67, 75, 151, 189, 212, 434, 515, 605, 624
Some speculations on feature recognition 189
splines 11, 146, 197, 312, 406
structural analysis 550
structural model 93
subdivision 114, 353
surface design 312, 317, 325
Surface drawing made simple - but not too simple 249
surface intersections 452
surface patches 325
surface plotting in R^3 249
surface smoothing 312
surfaces 127, 197, 259, 307, 325, 341, 347, 533, 597
symbolic computation 117

T
tangent plane continuity 325

thermal analysis 525
 3D modelling 217
 3D modelling as part of architectural design 221
 3D modelling of agricultural tractor 624
 3D triangulation procedure 239
 time and space complexity 17
 Time and space efficient net extractor 17
 topologic reasoning 587
 tractor design 624
 Triangulation of scattered data in

3D space 239
 turning operations 281
 twists 341
 Twists, curvatures and surface interrogation 341

V
 Variation of geometries based on a geometric-reasoning method 117
 vector sum 183
 viewing models 249

visual continuity 307
 VLSI design 263, 272, 382
 VLSI design with object-oriented knowledge bases 272

W
 wireframes 171
 world model 93

Z
 z-transforms 100

AUTHOR INDEX

A
Aldabbagh, H see Kharrufa, S
Aldefeld, B Variation of geometries based on a geometric-reasoning method 117
Andersson, E, Andersson, R, Boman, M, Elmroth, T, Dahlberg, B and Johansson, B Automatic construction of surfaces with prescribed shape 317
Andersson, R see Andersson, E
Aspragathos, N A Program for torsional dynamic modelling of drive systems and fatigue life prediction 555
Asteasu, C Intersection of arbitrary surfaces 533
Athienitis, A see Haghighat, F
Ayala, D Boolean operations between solids and surfaces by octrees: model and algorithm 452

B
Bajaj, C L see Wu, M C
Barnhill, R E, Farin, G, Fayard, L and Hagen, H Twists, curvatures and surface interrogation 341
Barry, P J and Goldman, R N De Casteljaup-type subdivision is peculiar to Bézier curves 114
Barry, P J and Goldman, R N Recursive proof of Boehm's knot insertion technique 181
Blount, G N Applications-based post-graduate course in CAE 290
Boehm, W Letter to the Editor: On the definition of geometric continuity 370
Boehm, W Visual continuity 307
Boese, F G Surface drawing made simple – but not too simple 249
Boman, M see Andersson, E
